Figures 2 and 4-10B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8 and 15-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 8 and 15 the scope of the term "type" cannot be determined because the common qualities that distinguish the individual members of the class *type* as an identifiable class are not recited in the claims, and they cannot otherwise be determined.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes

that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art and Dudderar (6297551).

At page 1, line 7 to page 5, line 7; page 6, lines 32-34; page 7, lines 2-24; page 7, line 32 to page 8, line 5; page 8, line 24 to page 9, line 2; page 10, lines 20-22; page 10, line 31 to page 12, line 3, applicant admits as prior art all of the limitations of the claims except for the following.

Applicant does not appear to admit as prior art a metal plating layer being formed of a second copper metal and capable of being soldered onto the extraction electrode, and the extraction electrode connects the lead terminal to the first electrode layer via the metal plating layer.

Nonetheless, at column 5, lines 4-47, Dudderar discloses a metal plating layer "coating" being formed of a second copper metal and capable of being soldered onto a copper electrode. Moreover, it would have been obvious to combine this product of Dudderar with the product of the

admitted prior art because it would enable soldering of the admitted prior art aluminum first electrode layer 97 to the copper extraction electrode 55.

Also, applicant does not appear to explicitly admit as prior art the process limitations

Also, although applicant does not appear to explicitly admit as prior art the process limitations, "wherein said metal plating layer is selectively formed in a region of said first electrode layer by using said protective film as a mask," and, "wherein said metal plating layer is formed by a wet electroless plating," the product of the admitted prior art inherently possesses any structural characteristics imparted by the process limitation.
